

Drug Testing Services

Omega Laboratories, Inc., is a complete hair, urine and oral fluids drug-testing laboratory. With the ability to provide specimen analysis for corporate clients, courts, law enforcement agencies and other organizations worldwide, Omega has emerged as the leader in cutting edge drug testing. Omega currently serves clients in 41 states, Canada, Central America and the United Kingdom.

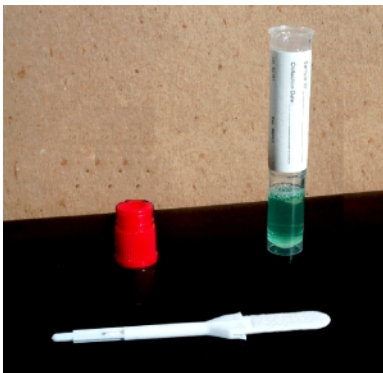

Instant Urine Screens

An excellent tool for detection of potential drug use on site. Laboratory confirmation of results is available for verification of screen results. Instant urine screen kits are available in 2 to 9-panel configurations.

Laboratory Urinalysis

When a laboratory analysis and confirmation of results are required, Omega can offer its C.A.P. (College of American Pathologists) accredited services. Using the latest testing methodology and state of the art laboratory equipment, Omega offer rapid return of accurate test results.

Oral Fluids (Saliva) Testing

Saliva testing offers an excellent test for immediate past use (up to the previous 18 hours). An excellent test for post-accident or reasonable suspicion situations. Oral tests detect the five most common panels for drugs of abuse and have complete laboratory confirmation included.

Hair Drug Testing

Omega Laboratories' state-of-the-art method for detecting drugs in hair using enzyme-immunoassay (EIA). EIA measures the drug molecules permanently entrapped in the hair, which were incorporated following introduction into the body and subsequent adsorption into the bloodstream.
